Coding requirements/rules:

- Indentation is important for keeping track of what statements are in which functions.
- For any and all tags, they should be in their own line to make them easy to find.
- Imports are ALWAYS located at top of whatever file.
- Open parentheses and brackets can stay on same line as function
- Closing parentheses and brackets should be on their own line and indented properly.
- Write the code as if you were the one inheriting it.

More to be added if we have any coding style conflicts
